

## Offender Population by Type of Supervision

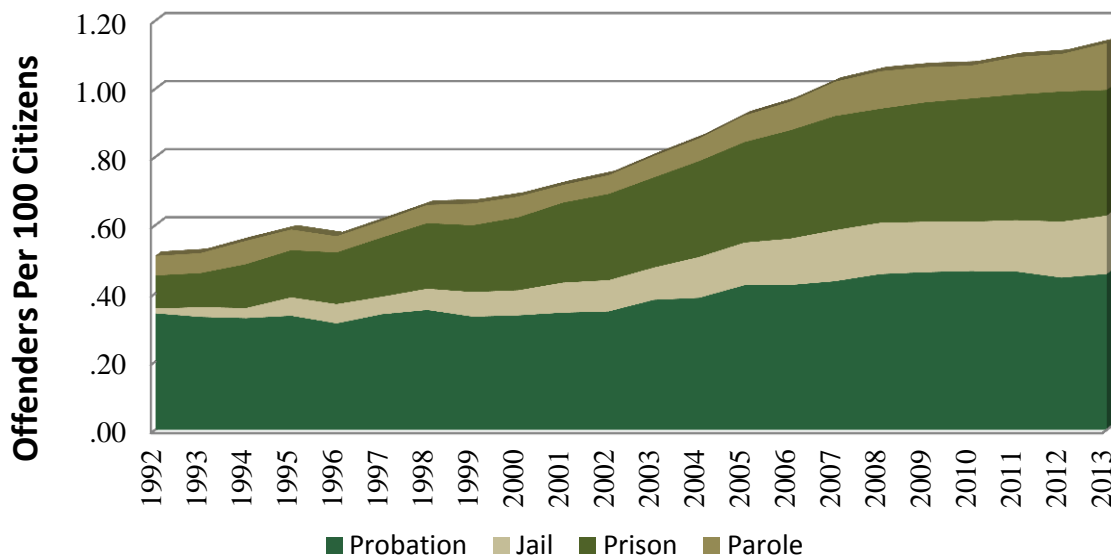

Report date: 9/4/2015

The first figure presents the number of offenders per 100 citizens by type of supervision for the average U.S. state for the years 1992 through 2013. The second figure presents the number of offenders per 100 citizens by supervision type in West Virginia during the same period.

**Figure 7.1: Number of Offenders per 100 Citizens by Supervision Type in the Average U.S. State, 1992-2013**

**Figure 7.2: Number of Offenders per 100 Citizens by Supervision Type in West Virginia, 1992-2013**

**Sources:** Annual U.S. Census Population Estimates by State, Annual Probation Survey, Annual Parole Survey, Annual Survey of Jails, Bureau of Justice Statistics Prisoners Series, and the Correctional Populations in the United States Series.

**Findings:** In the average U.S. state, the total number of offenders under supervision per 100 citizens increased between 1992 and 2008, and then began to decrease between 2008 and 2013. The distribution of offenders across different supervisions types remained fairly constant during this period. However, in West Virginia, the number of offenders under supervision per 100 citizens has increased steadily since 1992, and continued to grow in the period between 2008 and 2013. Much of this growth can be accounted by increases in the number of offenders being supervised in prisons and jails. As of 2013, there were about twice as many offenders under supervision per 100 citizens in West Virginia as there were in 1992.
